### Eisinger Topaz – intelligent taps with light effects

Topaz by Eisinger Swiss is an intelligent kitchen tap that helps users to see the light. Reduced to the bare necessities, this captivating system is characterised by a freely positionable, free-standing operating element. The element has no lever and is instead operated by touching, turning and pushing. Eisinger Topaz has three default settings for flow rate and temperature that are easy to change at any time. These settings are supported by two functional levels for regulating water flow and determining the temperature. The temperature display lights up in various different colours.

The puristic and elegant design of Eisinger Topaz has been nominated for the internationally renowned iF Design Award. The language of shape is heavily oriented on the small radii of the Techno-Line. The taps and operating elements in stainless steel are available in designs with a swivel spout and a pull-out nozzle. The system has an integrated cleaning mode as standard.

Franke Kitchen Systems will present the Eisinger Topaz at the Swissbau trade show from 12 – 16 January 2010 in Basel. You can find us in Hall 2.1, Booth A32.
