		Electronic touch control	
		Push-button control	The scope of delivery for the stainless steel
		Visual grease filter saturation indicator	version does not include a cover
		Continuous fan function	
		Overrun function	✓
		Remote control, optional	
		Extra quiet	✓
		Perimetric extraction	✓

### Planning notes for table-top hoods

- The cut-out for the kitchen worktop is 873 / 1173 / 1473 x 123 mm.
- Table-top hoods are less efficient at extracting steam from pots and pans at the front of the hob than conventional extractor hoods. We therefore recommend combining the table-top hood with panoramic glass ceramic hobs.
- The distance between hob and table-top hood must not exceed 50 mm.
- The table-top hood has four adjustable legs for adjusting the height (820 – 910 mm).
- The table-top hood and the control box must remain accessible. We recommend planning a detachable wall inside the kitchen unit in front of or behind the table-top hood.
- Do not connect to the mains power supply until every electrical component is connected to the control box.
- You can find further planning and installation information on our website: [www.eisinger-swiss.com](http://www.eisinger-swiss.com) in the section «Technical Data».
